# Armand clematis 'Apple Blossom'

*Clematis armandii* 'Apple Blossom'

Rating: 0.0 ( 0 votes)

This description is for species *Armand clematis* (*Clematis armandii*):

*Clematis armandii* is also known as Armand clematis. This is a fast climber with delicate white flowers that have a lovely scent similar to hawthorn blossom. It was originally discovered in China by the famous plant hunter Ernest Wilson and introduced into England in 1900. This is a tender variety and so is best suited to a sunny sheltered position out of the wind. Frost damage will turn the leaves an unattractive brown colour. After flowering, remove any dead growth, other than this it requires no further pruning. They are also quite prone to disease and pest damage. Not really a clematis for a beginner.
