# Bamboo

*Fargesia scabrida*

Rating: 0.0 ( 0 votes)

This description is for **Bamboo (Fargesia scabrida)**:

**This beautiful colorful bamboo is perfect for hiding yourself away from your neighbours Chinese style.**

Fargesia scabrida was first discovered in China in the 1970s. It's a tall growing bamboo reaching around 3-4 metres in height. It's an evergreen plant that will grow in clumps, It's good for creating a screen due to its' dense nature and height. This type of bamboo is less invasive than many others so you should be able to control the size and spread of this plant. The bamboo stalks change colour as the plant ages, from blue-black to red. It will grow best in rich moist soil in a sunny position, preferably one that gets some shade at the start and end of the day.
