

# bearberry cotoneaster 'Coral Beauty'

*Cotoneaster dammeri* 'Coral Beauty'

Rating: 5.0 ( 1 votes)

This description is for genus *Cotoneaster* (*Cotoneaster*):

Cotoneasters are extremely common and versatile garden plants that can be used for a variety of purposes. Whilst some varieties are large enough to create dense hedges, others are low-growing and so are ideal for ground-cover. Most cotoneasters produce small white or pinkish flowers, followed by bright red berries later in the season. The majority of cotoneaster species will thrive in direct sun or partial shade, with well-drained soil, however, there are exceptions to the rule. Some species are very drought tolerant, whilst others thrive in shade. Leaf colour also varies from dark greens through to silvery greys.
