This description is for **Bellflower (Campanula sarmatica)**:

If you want a plant that is bursting with visual appeal, campanula sarmatica or Georgian bellflower is that plant. Everything about this bellflower is eye-catching, from the crinkly-edged, lance-shaped leaves to the gorgeous lavender-blue, bell-shaped flowers that hang gracefully from the upright stems. The Georgian bellflower appreciates a fertile sandy soil that is moist and well-drained. It loves the sun but will grow in partially shaded areas too and is a grand specimen for a rock or alpine garden. It's also a great way to elevate your edging and can be grown in a container too, making it ideal for small courtyard gardens.
