

# Crocus 'Goldilocks'

*Crocus 'Goldilocks'*

Rating: 5.0 ( 2 votes)

This description is for genus *Crocus* (*Crocus*) :

Crocuses are a large genus of deciduous and perennial flowering bulbs that are low growing and ideal for short-term seasonal interest. Flowers come in a variety of colours, from deep orange and purple, to pale white. Crocuses don't generally grow very tall, making them ideal plants for containers and underplanting. Crocuses are best planted in full sun where the soil is well-drained, poor and gritty. This ensures that bulbs don't rot during wet winters. Crocus bulbs can flower in the spring, autumn or winter depending on their variety, making them a versatile addition to the garden.
