Rosemary (*Rosmarinus officinalis*):

Rosmarinus officinalis is commonly known as Rosemary. A herb that's great for cooking with, it's evergreen so you can use it all year round. It can be hard to get it established, but once it is, it is very hardy and will survive all but the very coldest winters. The name Rosemary comes from the Latin words *ros* and *marinus*, which means dew of the sea. This is because it needs no watering and can survive simply on water carried in on a sea breeze. It has needle like leaves that give off a strong herbal fragrance. It has small purple or white flowers. Don't let rosemary get waterlogged, and plant it in a sunny spot. A crown of rosemary was often worn by the bride in wedding ceremonies in the Middle Ages.
