

Wild Bleeding Heart

Dicentra formosa

Rating: 0.0 (0 votes)

This description is for *Wild Bleeding Heart (Dicentra formosa)*:

Wild Bleeding Heart 'Landtrees' a far more sensible species than 'Seatrees' and 'Skytrees'.

The Wild Bleeding Heart 'Landtrees' is a wonderful plant that flowers with white, blushed pink blooms during spring and summer. *Dicentra formosa* is toxic if eaten. Its leaves may also trigger skin allergies. It's a hardy little plant, coping with all the weather can throw at it, and likes a partially shady position in the garden to best thrive. It's easy to grow and requires little on-going maintenance.
